C. Route and module quick reference 39

Note · How to read this guide.
Part A is for the owner and the developer who installs, customizes and hosts ShaheenLMS. Part B is for staff at the school or college. Everything stated here was checked in the code or in the running application; anything that could not be checked is marked *not verified*.

PART A

Owner and developer guide

What ShaheenLMS is, how it is built, how to install, customize, deploy and secure it, and what still needs work.

1. What ShaheenLMS is

ShaheenLMS is a web-based management system for schools and colleges. It keeps students, staff, classes, subjects, exams, marks, report cards, timetables and fees in one database, and gives each person a login that only shows what their role needs.

It is built on the open-source *lav_sms* project (Laravel School Management System) and has been rebranded as ShaheenLMS with a green theme and the TenH Tech credit. It runs in any modern browser; there is no mobile app.

For the institute

Admission, class and section setup, exam records, report cards, tabulation sheets, fee collection and receipts.

For teachers

Class lists, mark entry per subject, comments and skill ratings, marksheets and timetables.

For families

Students and parents log in to see profiles, timetables and published results.

Who uses it

Six roles are active in the seeded system: **Super Admin**, **Admin**, **Teacher**, **Accountant**, **Student** and **Parent**. A seventh type, *Librarian*, appears in the code but is commented out of the user-type seeder and has no working pages.

2. Feature overview

Module	What it does	Used by
Users and roles	Create staff and parent accounts, view profiles, reset passwords.	Super Admin, Admin
Classes and sections	Classes grouped by class type (Creche, Nursery, Primary, Junior and Senior Secondary); each class has sections with a form teacher.	Super Admin, Admin
Subjects	Subjects per class, each assigned to a teacher.	Super Admin, Admin
Students	Two-step admission form, class lists, profiles, promotion to the next class, graduation list.	Super Admin, Admin; Teachers view lists
Dormitories	Boarding houses that students can be assigned to.	Super Admin, Admin
Exams and grades	Exams per term, grade scales per class type.	Super Admin, Admin
Marks	Mark entry per exam, class, section and subject; comments and skill ratings; batch fix.	Super Admin, Admin, Teacher
Marksheets and tabulation	Per-student report card (view and print) and a class tabulation sheet.	Staff; Students and Parents for their own
Result PINs	Scratch-card style PINs required to see results when the exam is locked.	Super Admin (create); Students (enter)
Timetables	Class and exam timetables built from time slots and subjects; printable.	Created by Admins; viewed by all
Payments	Fee items per class, per-student invoices, part payments, receipts.	Super Admin, Admin, Accountant
System settings	School name, acronym, contacts, current session, term dates, next-term fees, logo, exam lock.	Super Admin
My account	Change own password and profile details.	Everyone
Events calendar	Calendar on the dashboard. **Template demo events only**	Everyone (view)

Warning · Not present.
There is no noticeboard, no study-materials module and no working library. Library tables (`books`, `book_requests`) and two controllers exist, but no routes or menus point to them.

3. Technology stack and architecture

Layer	Technology (verified in code)
Framework	Laravel 8.83.29 (PHP framework, MVC)
Language	PHP; `composer.json` allows ^7.3, ^8.0, ^8.1. Tested here on PHP 8.1.34.
Database	MySQL (via `pdo_mysql`); 29 migrations
Views	Blade templates on the Limitless admin theme (Bootstrap 4, jQuery)
UI plugins	DataTables, Select2, FullCalendar, PNotify, SweetAlert, bootstrap-datepicker
PDF	barryvdh/laravel-dompdf 0.8.7 with dompdf 0.8.3 (receipts)
File storage	Laravel `public` disk (`storage/app/public` , served through `public/storage`)
Custom styling	`public/assets/css/shaheenlms-theme.css` and `shaheenlms-ui.css`

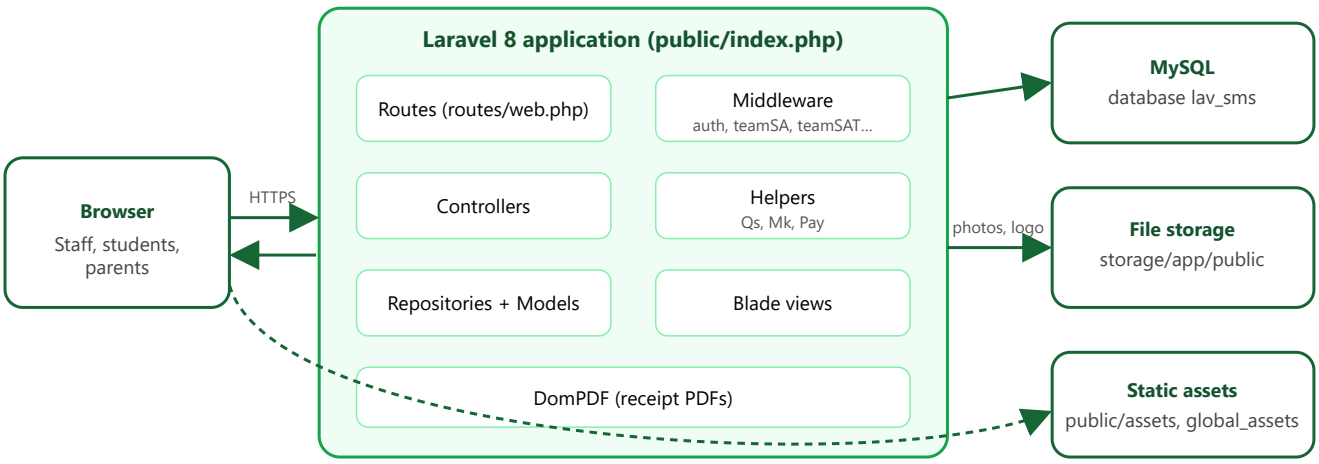

Figure 1. System architecture. Requests pass through routes and role middleware to controllers, which use repositories and models to reach MySQL and render Blade views.

Business rules live mostly in controllers and three helper classes. `App\Helpers\Qs` holds role checks and settings, `Mk` handles marks and grades, and `Pay` handles payment years. Repositories in `app/Repositories` wrap the Eloquent models.

4. Project folder structure

lav_sms/	
app/Http/Controllers/	Request handling; SupportTeam, SuperAdmin, MyParent groups
app/Http/Middleware/Custom/	Role gates: SuperAdmin, TeamSA, TeamSAT, TeamAccount, MyParent
app/Helpers/	Qs (roles, settings), Mk (marks), Pay (payments)
app/Models/ · app/Repositories/	Database tables as classes, and query wrappers
app/Http/Requests/	Form validation rules
config/	App name, database, filesystems, mail
database/migrations/	29 table definitions, plus foreign keys
database/seeders/	Demo data: classes, subjects, users, students
public/	Web root: index.php, favicon
public/assets/css/	Theme CSS, including the ShaheenLMS layers
public/images/	ShaheenLMS logo and favicon SVGs
resources/views/	Blade pages per role under pages/
resources/views/partials/	Layout pieces: menu, header, footer, includes
routes/web.php	Every URL and its middleware
storage/app/public/	Uploaded photos and logo (needs storage:link)

Figure 2. The folders that matter. Never edit `vendor/` or `node_modules/`; they are installed by Composer and npm.

5. Local setup, step by step

These steps match how this copy runs on Windows with XAMPP. Run commands in a terminal opened in the `lav_sms` folder.

1. **Install the tools.** XAMPP with PHP 8.1 (MySQL included), Composer, and Git.
2. **Start MySQL** from the XAMPP Control Panel and create an empty database named `lav_sms` in phpMyAdmin.
3. **Install PHP packages:** `composer install`
4. **Create the environment file:** copy `.env.example` to `.env`, then set:

```
APP_NAME=ShaheenLMS
APP_URL=http://127.0.0.1:8000
DB_DATABASE=lav_sms
DB_USERNAME=root
DB_PASSWORD=
```

5. **Generate the app key:** `php artisan key:generate`
6. **Create tables and demo data:** `php artisan migrate --seed`
7. **Link the upload folder:** `php artisan storage:link`
8. **Start the app:** `php artisan serve`, then open `http://127.0.0.1:8000` and sign in with a demo account (Appendix A).

Error you see	Fix
SQLSTATE[HY000] [2002] connection refused	MySQL is not running. Start it in XAMPP, and check `DB_HOST` and `DB_PORT`.
No application encryption key has been specified	Run `php artisan key:generate`.
419 Page Expired on login	Session cookie mismatch. Use the same host as `APP_URL` (127.0.0.1 vs localhost) and clear cookies.
Photos or logo do not show	Run `php artisan storage:link`.
Class not found after pulling code	`composer dump-autoload`, then `php artisan optimize:clear`.
500 error when downloading a receipt PDF	Known issue: dompdf 0.8 fails on PHP 8.1. See chapter 11.
"Record Not Found" when opening marks	No students are enrolled in the current session. See the FAQ.

6. Database overview

The database has 29 migrations. The diagram shows the main tables and how they link; lookup tables (blood groups, states, LGAs, nationalities) and framework tables are left out for readability.

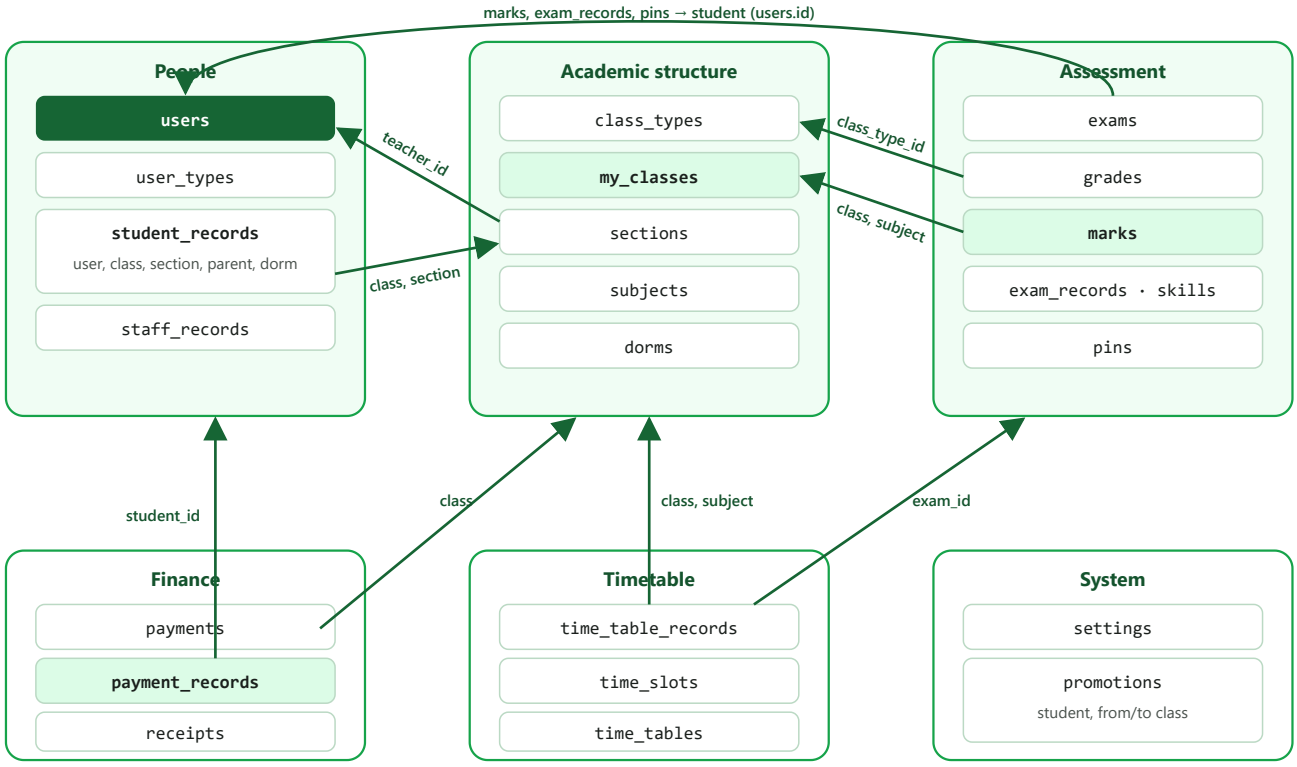

Figure 3. Simplified relationship diagram, grouped by area. Arrows point from a table to the table it references. A student is a `users` row plus a `student_records` row that ties them to a class, section, parent and session.

Table	Holds
users	Every account. `user_type` is the role; `code` is a unique hash used in URLs.
student_records	Admission number, class, section, parent, dorm, session, graduation flag.
staff_records	Employment date and code for staff.
marks, exam_records	Per-subject scores, and per-exam totals, positions, comments and skill ratings.
payments, payment_records, receipts	Fee items, each student's balance for an item, and every part payment.
settings	Key/value pairs: school name, current session, term dates, fees, logo, exam lock.
promotions	History of class moves, so a promotion can be reset.

7. Roles and permissions

Access is enforced by route and controller middleware. The groups are defined in `app/Helpers/Qs.php`: **TeamSA** = Super Admin and Admin; **TeamSAT** = TeamSA plus Teacher; **TeamAccount** = TeamSA plus Accountant. Admins cannot create or see other admins: the user form only offers types below level 2.

Module / action	Super Admin	Admin	Teacher	Accountant	Student	Parent
System settings	Full	–	–	–	–	–
Users: create, edit	Full	Edit[1]	–	–	–	–
Users: delete, reset password	Yes	–	–	–	–	–
Classes, sections, subjects, dorms, exams, grades	Full	No delete	–	–	–	–
Admit, edit students; promotion; graduated list	Full	No delete	–	–	–	–
Student lists by class	View	View	View	–	–	–
Student profile	View	View	View	–	Own	Children
Enter marks, comments, skills	Yes	Yes	Yes	–	–	–
Tabulation sheet, batch fix	Yes	Yes	–	–	–	–
View marksheet	All	All	All	–	Own	Children
Print marksheet	All	All	–	–	Own	Children
Fees, invoices, receipts	Full	Full	–	Full	–	–
Result PINs (create)	Yes[2]	Route only[2]	–	–	Enter PIN	Enter PIN
Timetables: create, edit	Yes	Yes	–	–	–	–
Timetables: view, print	Yes	Yes	Yes	Yes	Yes	Yes
My account (own password, profile)	Yes	Yes	Yes	Yes	Yes	Yes

[1] Admins can create teachers, parents and accountants, not other admins. Delete and password reset are Super Admin only. [2] PIN pages only open while *Lock Exam* is on; the menu link is shown to Super Admin only, but the route also allows Admin.

Warning · Gap found in code.
Deleting a timetable record (`DELETE /timetables/records/{id}`, route `ttr.destroy`) has no role middleware, so any signed-in user could call it. Add `teamSA` to that route before going live.

8. How to customize safely

Keep changes in your own files where possible, commit before each change, and test with every role afterwards.

Change	Where and how
School name and logo	In the app: *Settings* → Name of School, School Acronym, Change Logo. The default logo is `public/images/shaheen_lms_logo.svg`, returned by `Qs::getLogo()`.
Colours	Edit the variables at the top of `public/assets/css/shaheenlms-ui.css` (`--brand`, `--brand-strong`, `--brand-dark`). Keep white text only on `#15803D` or darker for readable contrast.
Footer credit	`resources/views/partials/footer.blade.php`, both the web and the print branch.
App name in the tab title	`APP_NAME` in `.env`, with `config/app.php` as the fallback.
Currency	Hard-coded as a struck-through "N" (Naira) in payment views such as `payments/create.blade.php`, `edit` and `receipt`. Replace it there, for example with `Rs`.
Locale and time zone	`config/app.php`: `'timezone' => 'UTC'` (set e.g. `'Asia/Karachi'`), `'locale' => 'en'`. Messages are in `resources/lang/en`.
States and LGAs	Address fields use Nigerian states and LGAs from `StatesTableSeeder` and `LgasTableSeeder`. Replace those seeders for your country before the first migration.

Add a new field (example: student CNIC number)

1. Create a migration: `php artisan make:migration add_cnic_to_student_records`, add `$table->string('cnic')->nullable();`, then run `php artisan migrate`.
2. Add `'cnic'` to `$fillable` in `app/Models/StudentRecord.php`.
3. Add the input to `resources/views/pages/support_team/students/add.blade.php` and `edit.blade.php`.
4. Add a rule in `app/Http/Requests/Student/StudentRecordCreate.php` and `StudentRecordUpdate.php`, and include the field where the controller collects record data.

Add a new page

```
// routes/web.php, inside the auth group
Route::get('notices', 'NoticeController@index')
     ->name('notices.index')->middleware('teamSA');
```

Create `app/Http/Controllers/NoticeController.php` returning `view('pages.support_team.notices.index')`, make the Blade file extend `layouts.master`, and add a link in `resources/views/partials/menu.blade.php` inside the matching `@if(Qs::userIs…())` block.

Add a new role

1. Insert a row in `user_types` (title, name, level).
2. Add a `userIsX()` check, and add the title to the right groups (`getTeamSA`, `getTeamAccount` ...) in `app/Helpers/Qs.php`.
3. Create `resources/views/pages/<title>/menu.blade.php`; the sidebar includes it automatically by role name.
4. Protect its routes with a middleware in `app/Http/Middleware/Custom`, registered in `app/Http/Kernel.php`.

9. Deployment guide

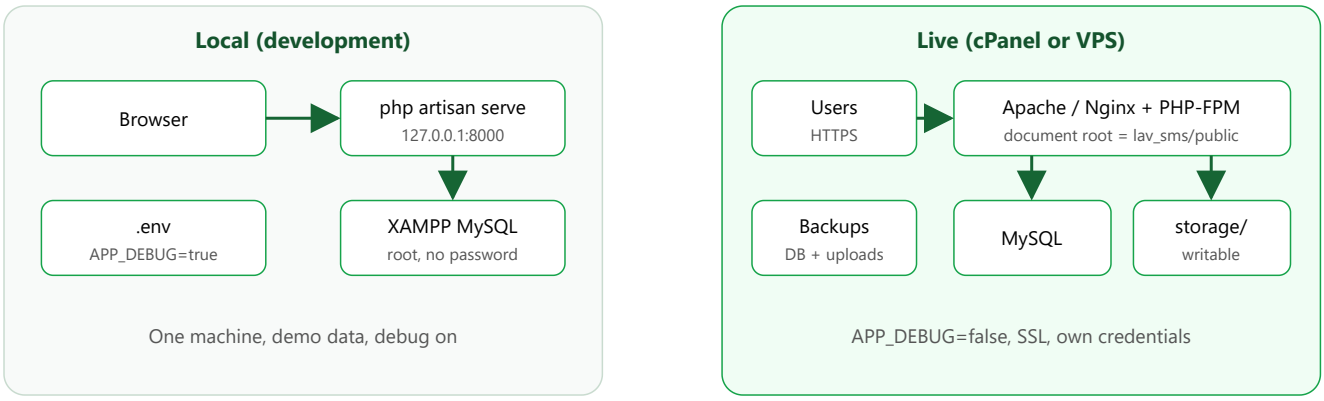

Figure 4. Local development compared with live hosting.

The deployment steps below are standard Laravel 8 practice. They were not run against a live server for this guide (*not verified* on real hosting).

Shared cPanel hosting

1. Choose PHP 8.0 or 8.1 in *Select PHP Version*.
2. Upload the project above `public_html` (for example `~/lav_sms`).
3. Point the domain's document root to `~/lav_sms/public`. If you cannot, move `public`'s contents into `public_html` and fix the paths in `index.php`.
4. Create the MySQL database and user in cPanel.
5. Upload a production `.env` (checklist below).
6. In Terminal: `composer install --no-dev --optimize-autoloader`, `php artisan migrate --force`, `php artisan storage:link`, `php artisan config:cache`.
7. Turn on AutoSSL for the domain.

VPS (Ubuntu, Nginx)

1. Install Nginx, PHP 8.1-FPM, MySQL 8 and Composer.
2. Clone into `/var/www/shaheenlms`; set the Nginx `root` to `…/public` with `try_files $uri $uri/ /index.php?$query_string;`.
3. `chown -R www-data:www-data storage bootstrap/cache`, `chmod -R 775` on the same folders.
4. Run the same Composer and Artisan commands as for cPanel.
5. Get SSL: `certbot --nginx -d school.example.com`.
6. Schedule nightly database and `storage/app/public` backups to another machine.

Production checklist	Value or action
PHP version and extensions	8.0 or 8.1; pdo_mysql, mbstring, openssl, fileinfo, gd, dom, zip (all present on the test machine)
Document root	The `public` folder only, never the project root
.env	`APP_ENV=production`, `APP_DEBUG=false`, real `APP_URL` with https, new `APP_KEY`, strong database password
Migrate	`php artisan migrate --force`. Seed only on purpose: the seeders create demo users with the password `cj`.

Production checklist	Value or action
Storage	`php artisan storage:link`; `storage` and `bootstrap/cache` writable by the web server
Caches	`config:cache`, `route:cache`, `view:cache` after each deploy
Cron	Optional: the scheduler has no tasks defined (`app/Console/Kernel.php`). Add `* * * * * php artisan schedule:run` only if you add tasks.
Backups	Daily `mysqldump` plus a copy of `storage/app/public`, kept off-server; test a restore

10. Security and maintenance checklist

Important · Laravel 8 is end of life.
Laravel 8 stopped receiving security fixes in January 2023. Plan the upgrade path 8 → 9 → 10 → 11, one major version at a time. At each step, update `composer.json`, follow the official upgrade guide, run the tests and click through every role. Replace barryvdh/laravel-dompdf 0.8 with 2.x at the same time.

	Item	Why (verified in code)
☐	Delete or change all demo accounts	Seeders create six demo logins with the password `cj`.
☐	Make users change default passwords	New students get the password `student`; new staff get their role name (e.g. `teacher`) when the field is left blank. Password resets set these same values.
☐	Set `APP_DEBUG=false`	The local `.env` and `.env.example` both have `APP_DEBUG=true`, which shows stack traces to visitors.
☐	Disable public registration	`Auth::routes()` exposes `/register` (it returns HTTP 200). Use `Auth::routes(['register' => false])`.
☐	Restrict timetable record deletion	`ttr.destroy` has no role check (chapter 7).
☐	Block SVG logo uploads	`SettingUpdate` accepts `svg`; an SVG can carry script. Allow png and jpg only.
☐	Raise password rules	`UserRequest` allows passwords of only 3 characters.
☐	Back up daily and test restores	The app has no built-in backup.
☐	Apply updates monthly	`composer update` within the current major version, then retest.
☐	Use HTTPS everywhere	Logins and student data travel in every request.

11. Known limitations and recommended improvements

Priority	Issue	Recommendation
1	Receipt PDF download returns HTTP 500 on PHP 8.1 (dompdf 0.8.3 deprecation error, reproduced)	Upgrade to barryvdh/laravel-dompdf 2.x, or use PHP 7.4 temporarily. The printable HTML receipt still works.
2	Laravel 8 end of life	Upgrade path in chapter 10.
3	Default and demo passwords, `APP_DEBUG=true`, open `/register`	Production checklist in chapters 9 and 10.
4	Timetable record delete has no role check; SVG logo upload allowed	Add `teamSA` middleware; restrict mimes to png and jpg.
5	Dashboard calendar shows template demo events (`fullcalendar_basic.js`), not school events	Build an events table, or hide the calendar.
6	Naira currency, Nigerian states and LGAs, WAEC/NECO document types are hard-coded	Localize for your country before launch.
7	Library module unfinished (models and controllers, no routes); no noticeboard or study materials	Build as new modules or remove the dead code.
8	Only placeholder tests (`tests/Feature/ExampleTest.php` fails: expects 200 from `/`, gets a redirect)	Add feature tests per role before any upgrade.
9	Seed data sets the session to 2018-2019 and sample term dates in 2018	Set the real session and dates in Settings on day one.

PART B

Institute user manual

Step-by-step instructions for staff, students and parents. Screens show the demo data; your school's names and numbers will differ.

12. First-time setup order

Records depend on each other, so set the school up in this order. Every later step needs the earlier ones.

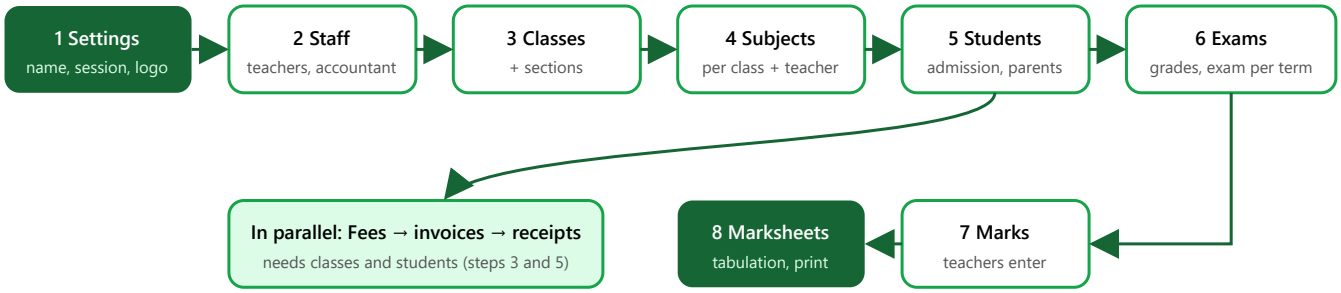

Figure 5. Main workflow. Fees run in parallel once classes and students exist.

#	Step	Where
1	School settings	Settings: name, acronym, phone, email, address, **current session**, term dates, logo.
2	Staff accounts	Users → Create New User (teachers, accountant, parents).
3	Classes and sections	Classes → Add Class; Sections → Add Section (choose the form teacher).
4	Subjects	Subjects → Add Subject (class and teacher).
5	Students	Students → Admit Student (link the parent account).
6	Grades and exams	Exams → Grades, then Exam List → Add Exam.
7	Fees	Administrative → Payments → Create Payment.

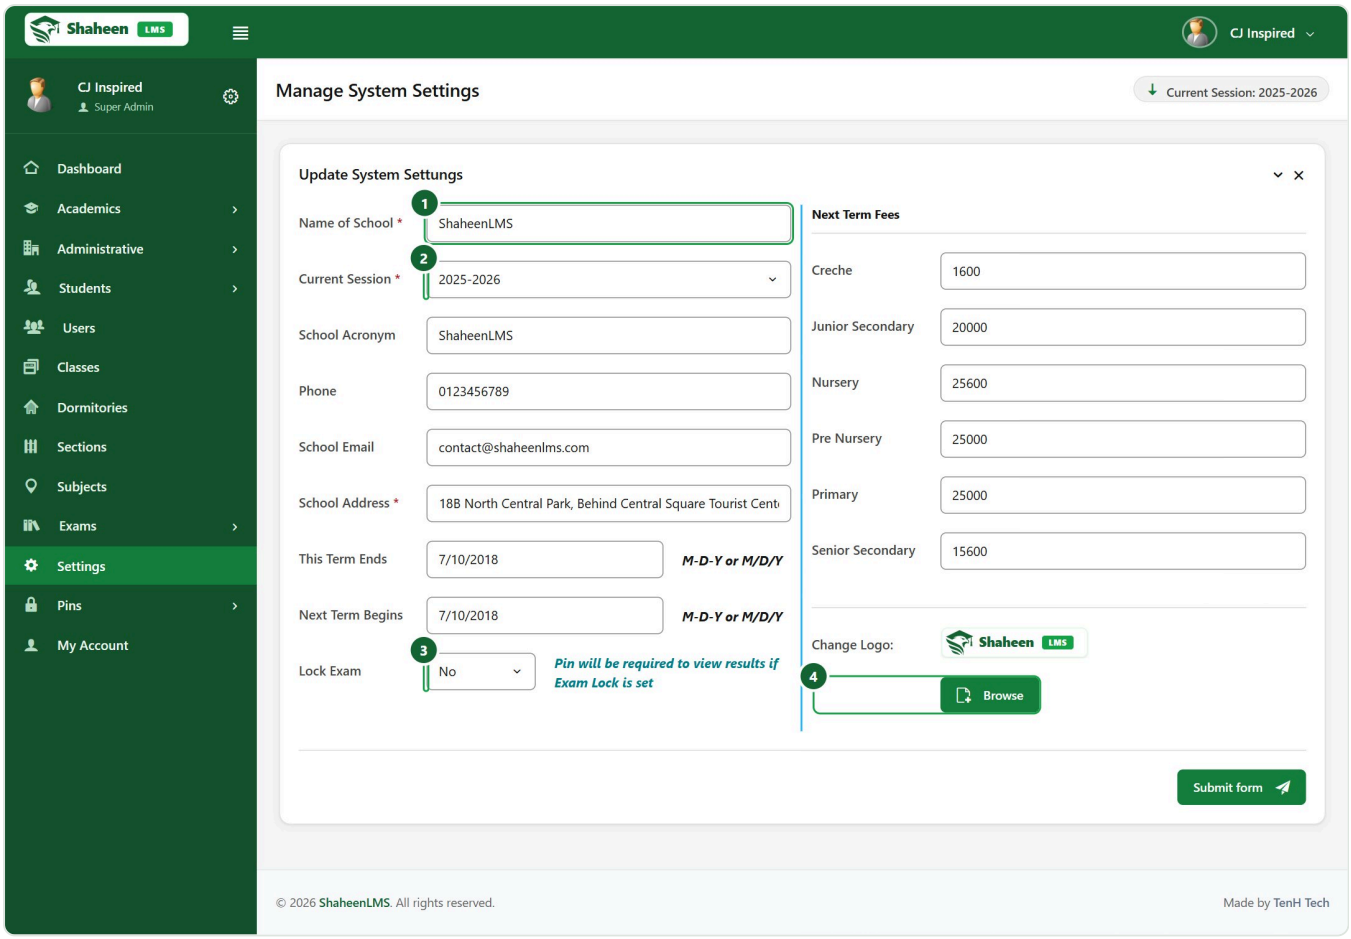

Figure 6. System settings (Super Admin). Set the current session first: student lists, marks and fees all filter by it.

1. School name shown across the system
2. Current session: drives students, marks and fees
3. Lock exam: requires PINs to view results
4. Upload school logo

13. Task guides by role

Signing in

1. Open the school's ShaheenLMS address in a browser.
2. Enter your **username or email** and your **password**, then press **Sign in**.
3. Forgot your password? Ask an administrator to reset it. The email reset link needs mail settings in `.env` (*not verified*).

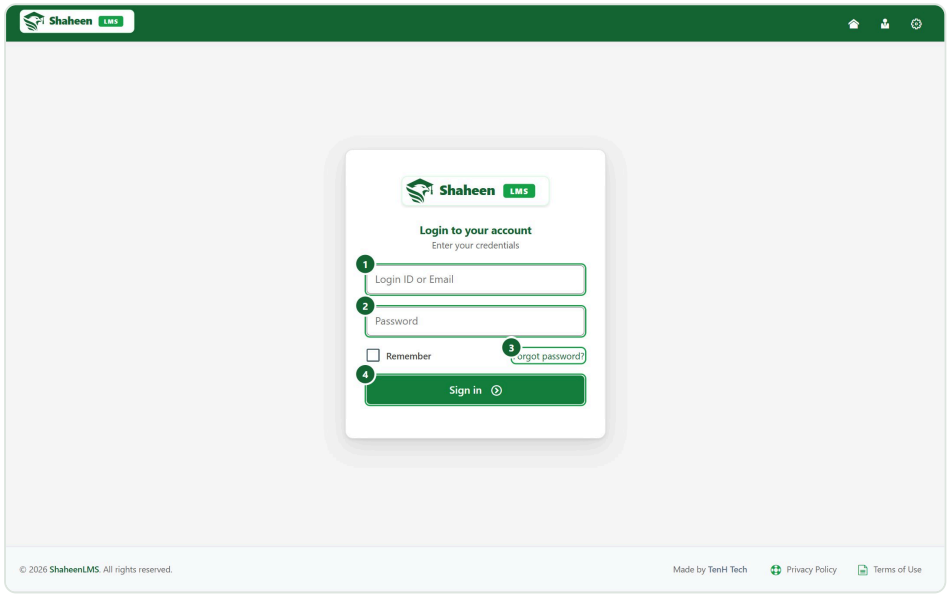

Figure 7. Login page.

1. Login ID (username) or email
2. Password
3. Forgot password link
4. Sign in

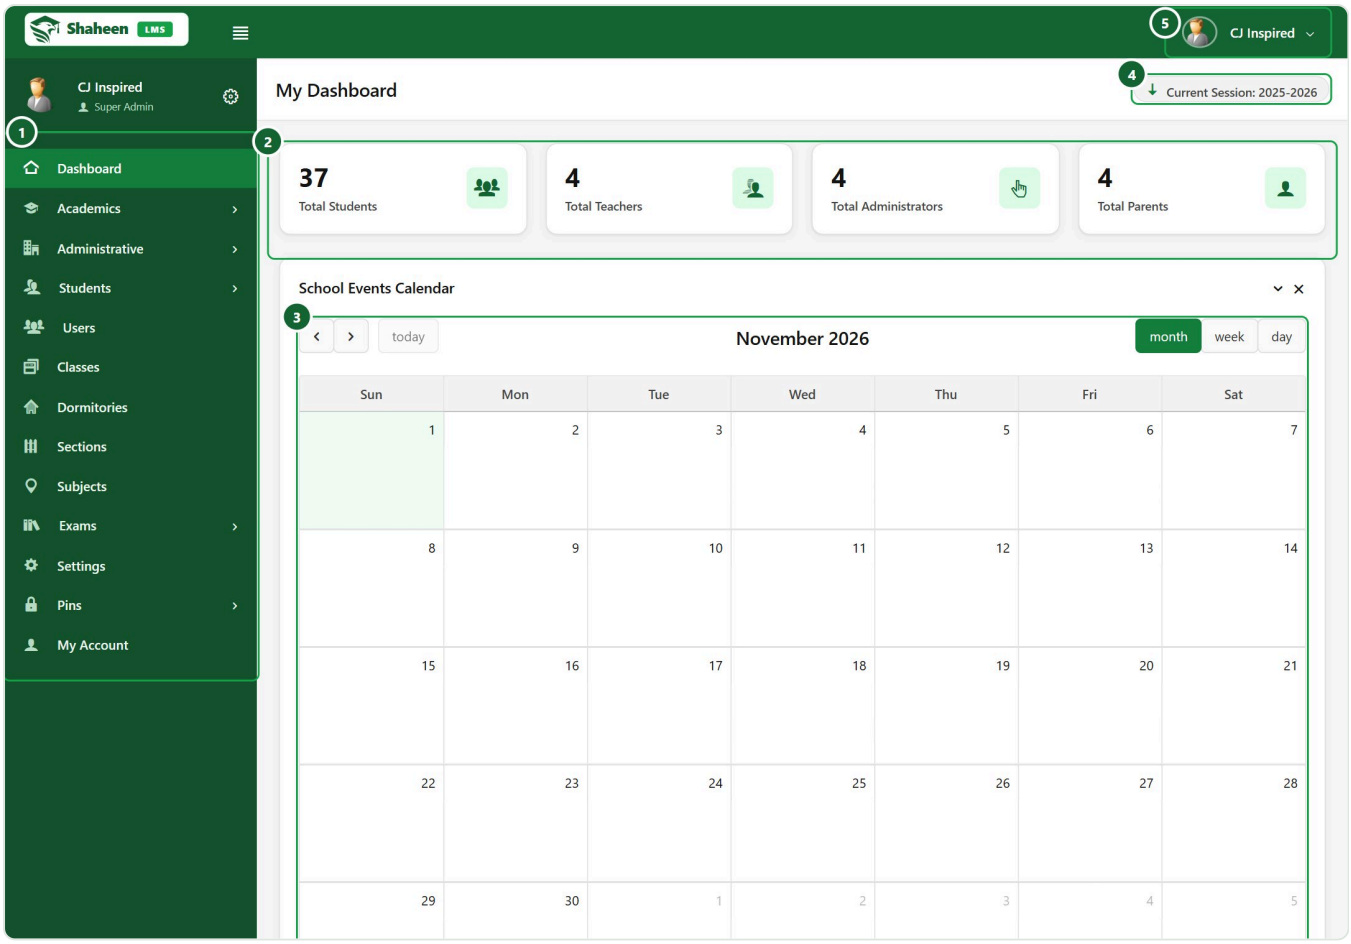

Figure 8. Super Admin dashboard. The sidebar changes by role; the four totals appear for Super Admin and Admin only.

1. Sidebar menu: only shows modules this role may use
2. Totals of students, teachers, admins and parents
3. Events calendar (template demo data, not stored in the database)
4. Current academic session
5. User menu: My profile, Account settings, Logout

Admin and Super Admin tasks

How to admit a student

1. Open **Students** → **Admit Student**.
2. Step 1, *Personal data*: full name, address, gender, nationality, state and LGA (all required), plus optional email, phone, date of birth, blood group and photo (JPEG or PNG, up to 2 MB).
3. Press **Next**. Step 2, *Student data*: class, section, year admitted, parent, dormitory and admission number.
4. Press **Submit**. The student's first password is `student`; ask them to change it.

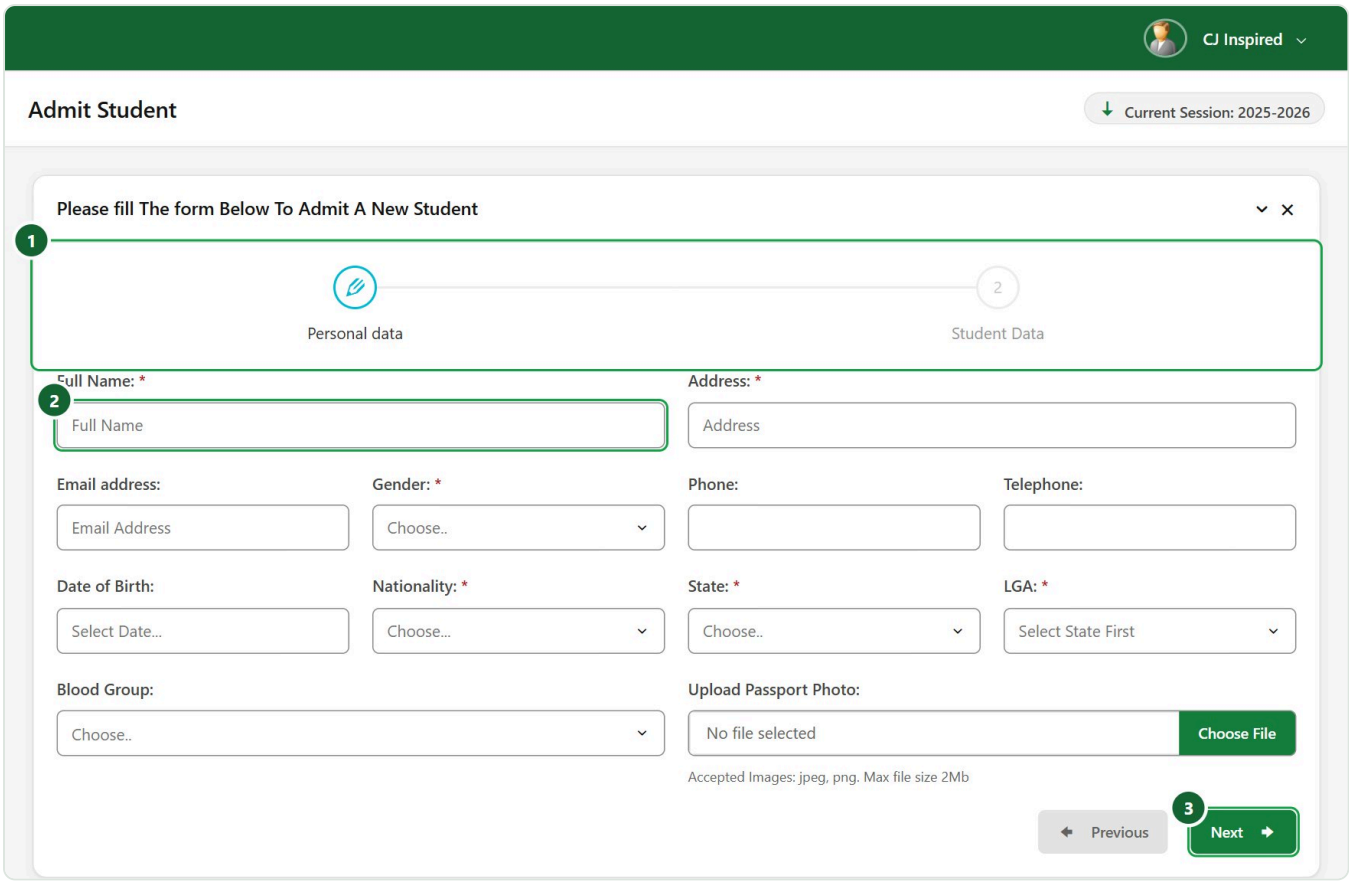

Figure 9. Admit Student, step 1 of 2.

1. Two steps: Personal data, then Student data
2. Required fields are marked with *
3. Next / Previous move between steps; Submit on the last step

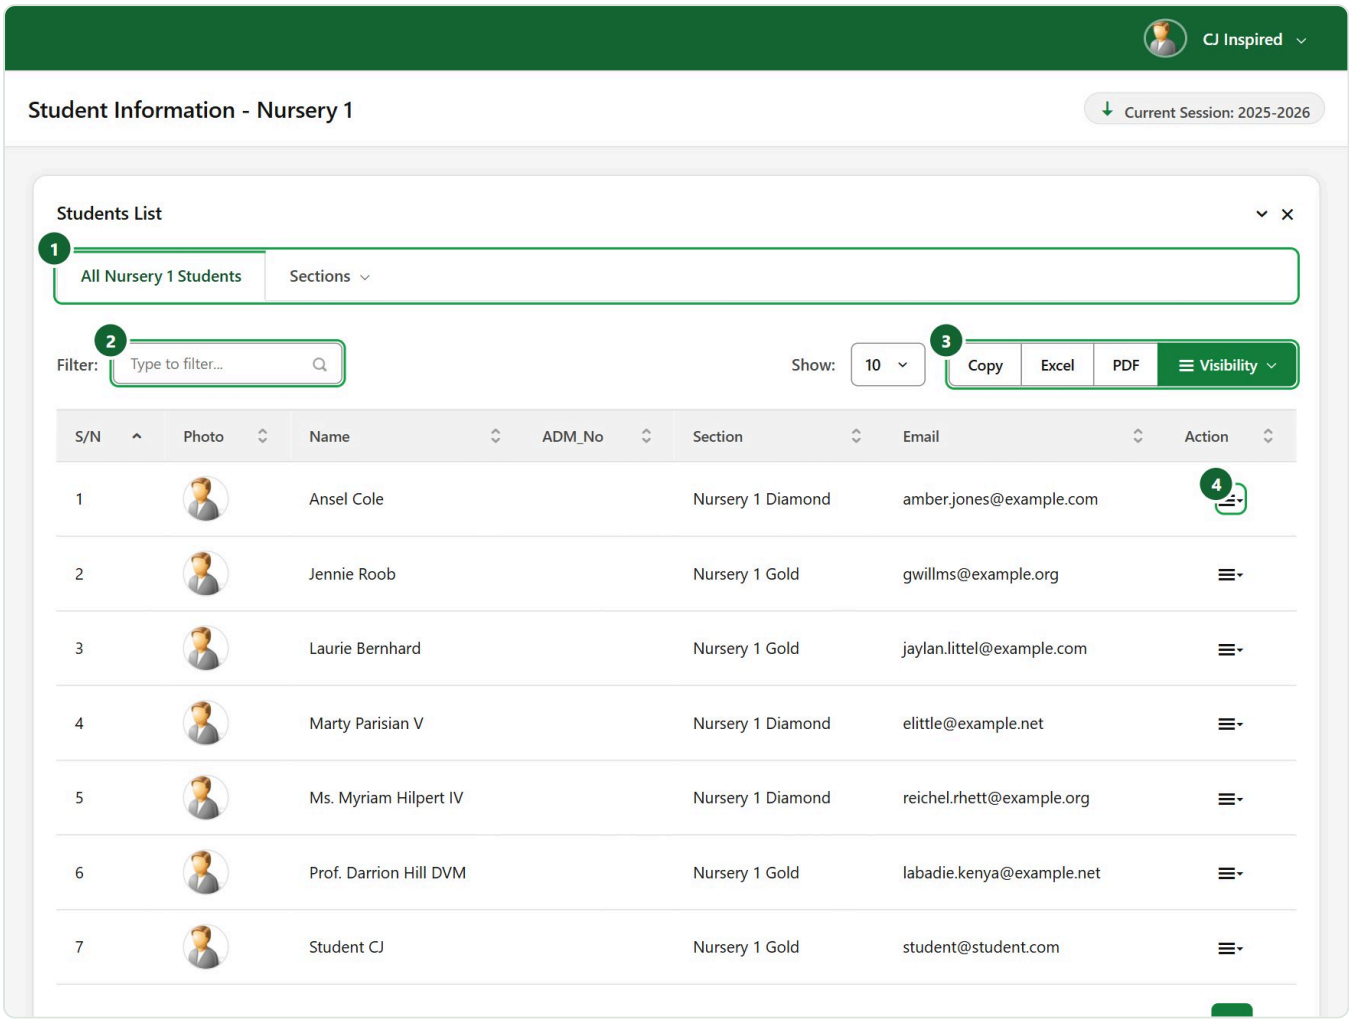

Figure 10. Student list for one class. Use the row menu to view, edit, reset the password or (Super Admin only) delete.

1. Tabs: all students in the class, or one section
2. Filter box: type to search the table
3. Export: Copy, Excel, PDF, choose columns
4. Row actions menu: view, edit, reset password, delete

How to create a staff or parent account

1. Open **Users**, tab **Create New User**.
2. Choose the **user type**, fill the required fields (name, address, gender, nationality, state, LGA) and optionally a username and password.
3. Press **Submit**. If you leave the password blank, it becomes the role name (for example `teacher`).

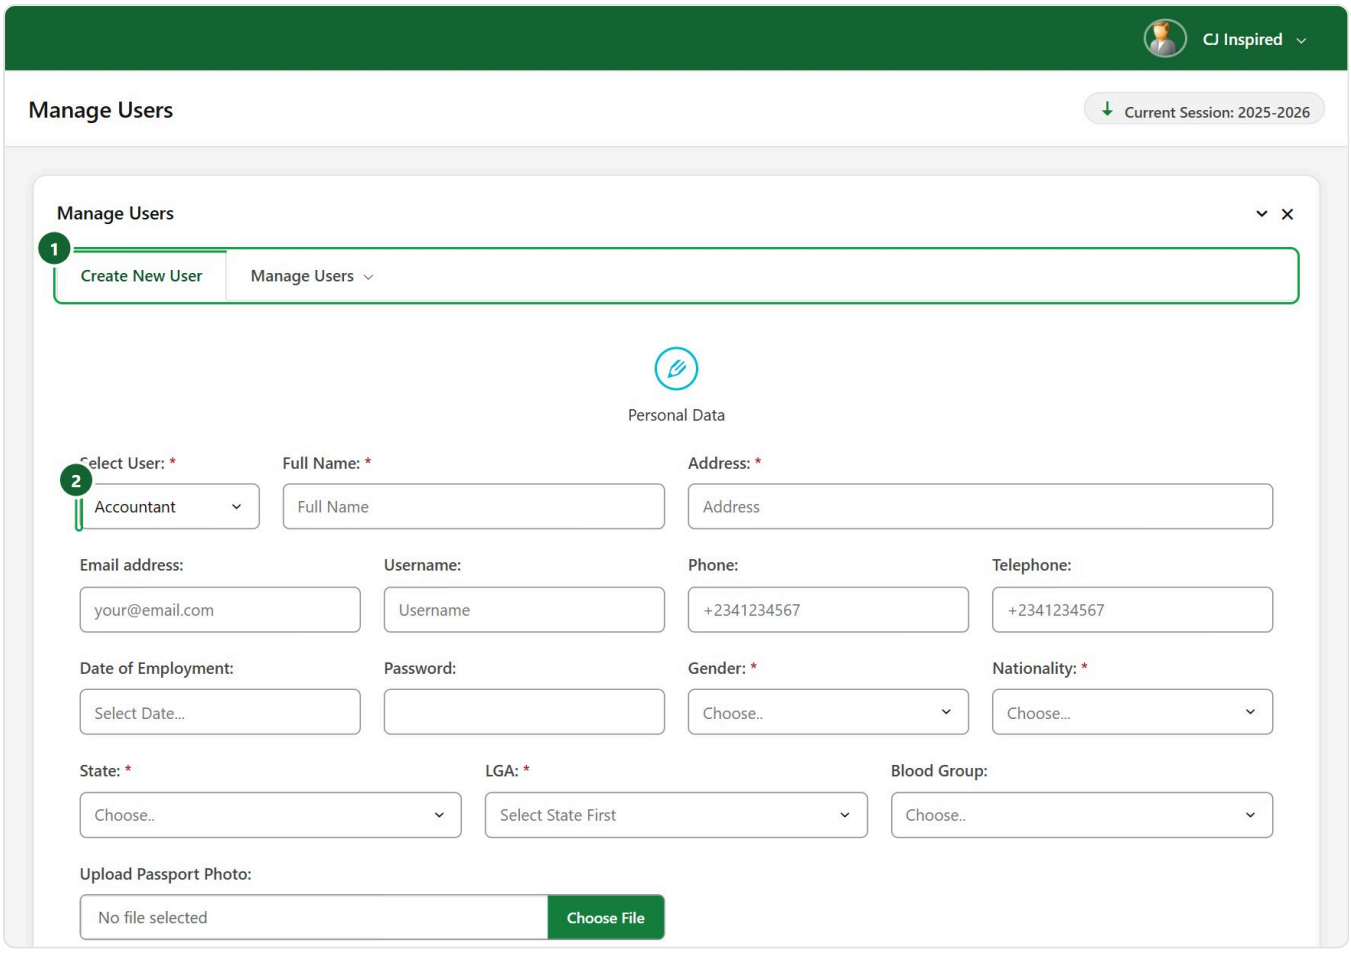

Figure 11. Users page with the Create New User form.

1. "Create New User" or "Manage Users" by type
2. User type (an Admin is offered only teacher, parent and accountant)

How to set up classes, sections and subjects

1. **Classes** → **Add Class**: name and class type.
2. **Sections** → **Add Section**: name, class and form teacher.
3. **Subjects** → **Add Subject**: name, short name, class and teacher.

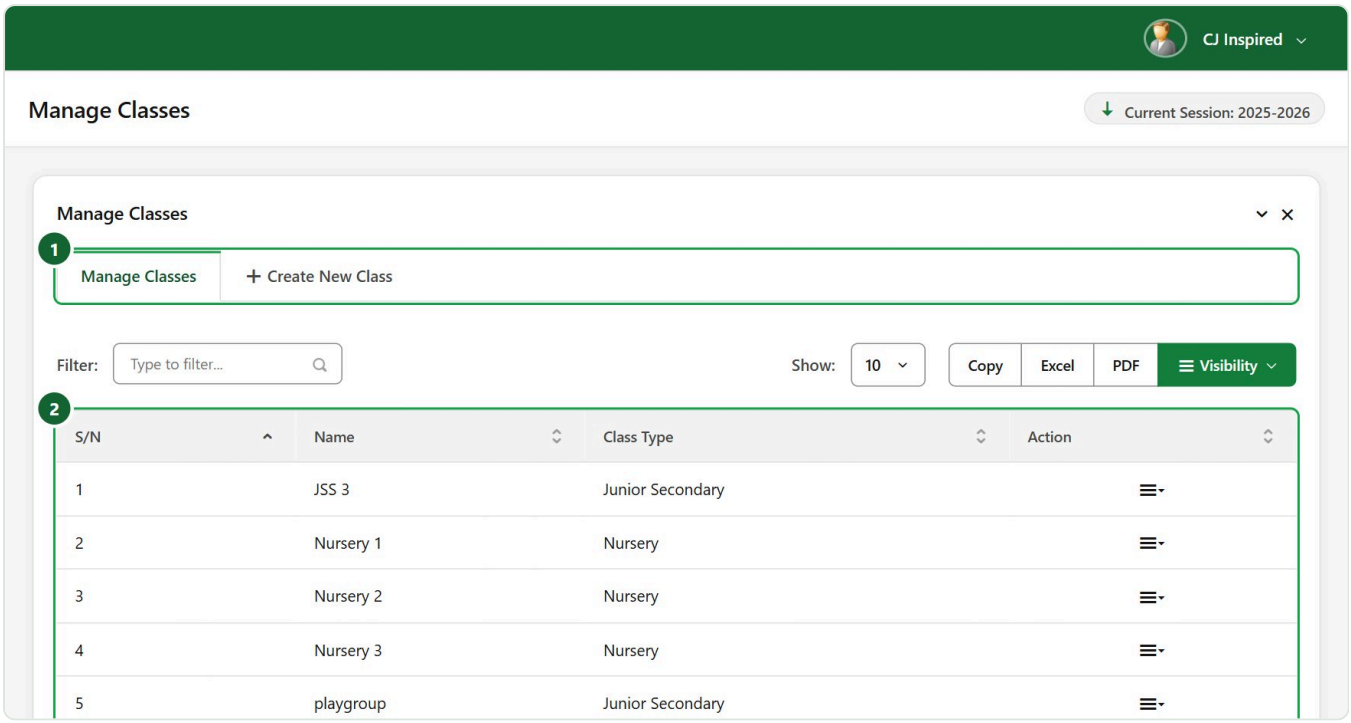

Figure 12. Classes.

1. Manage classes, or open "Add Class"
2. Class list with class type

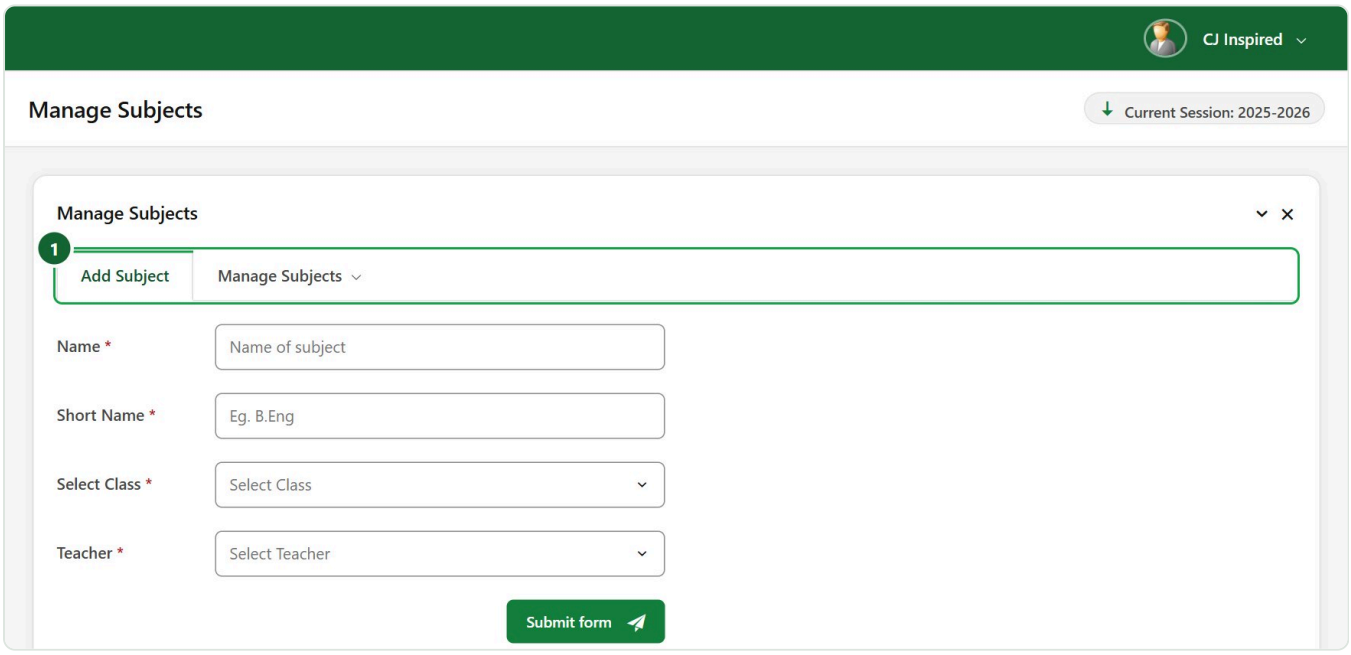

Figure 13. Subjects.

1. Add Subject, then subjects per class with their teacher

How to set up grades and exams

1. **Exams → Grades**: check the grade bands for each class type (A to F, each with a mark range and remark; for example A = 70–100, Excellent).
2. **Exams → Exam List → Add Exam**: name and term (1, 2 or 3). The exam belongs to the current session.

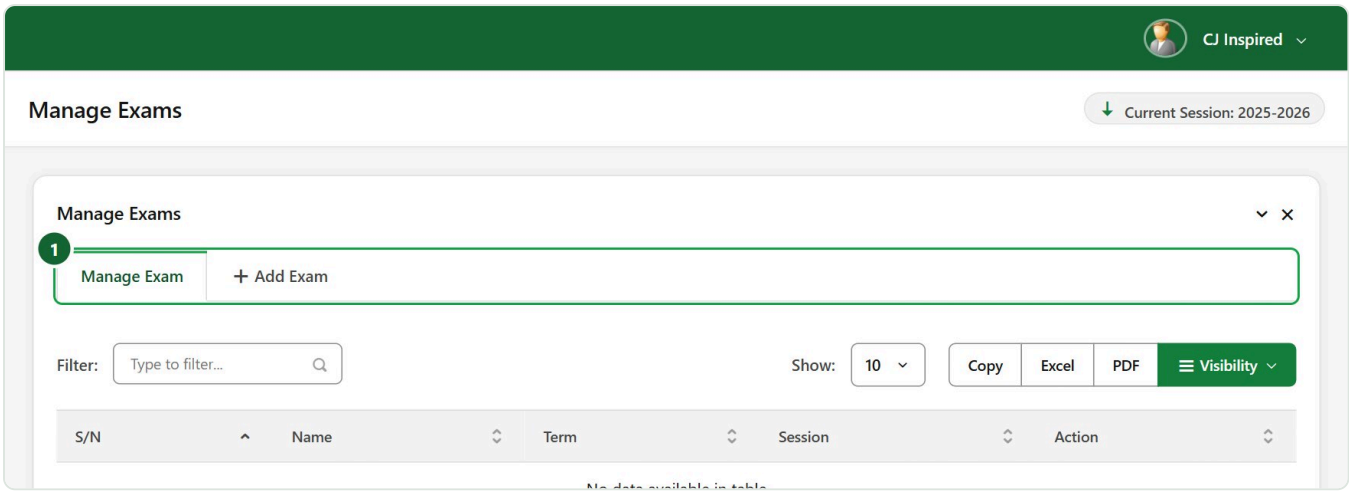

Figure 14. Exam list.

1. Manage Exam list and "Add Exam" (name and term)

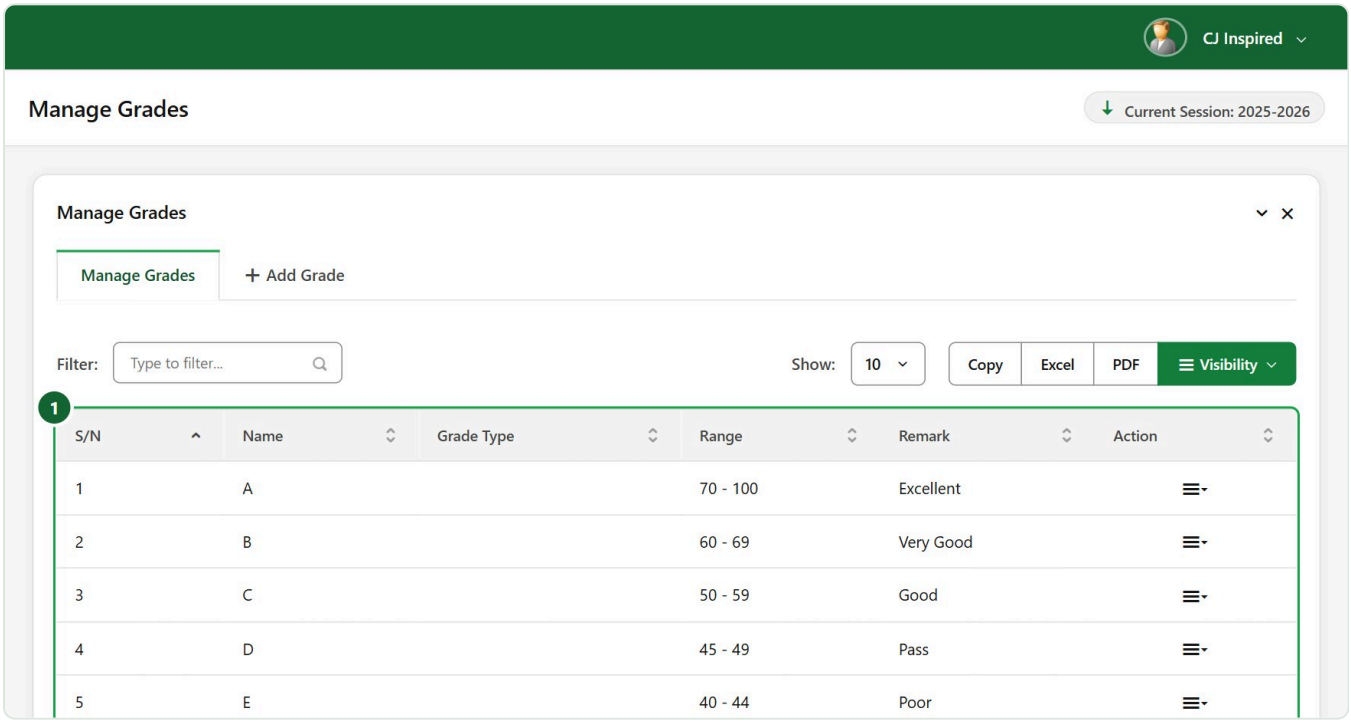

Figure 15. Grades.

1. Grade scale: grade name, mark range and remark

How to print a tabulation sheet

1. Open **Exams** → **Tabulation Sheet**.
2. Choose the exam, class and section, then press **View Sheet**.
3. Press **Print Tabulation Sheet** to open the printable page, then print from the browser.

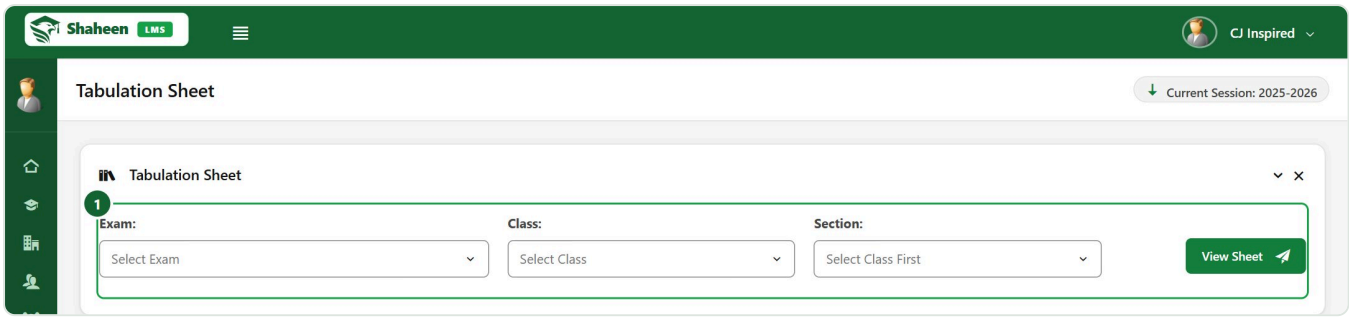

Figure 16. Tabulation sheet selector. The sheet itself needs entered marks; none exist in the demo data (not verified).

1. Choose Exam, Class and Section, then "View Sheet"

How to promote students

1. Open **Students** → **Student Promotion** → **Promote Students**.
2. Choose the current class and section, and the class and section to promote to, then load the students.
3. For each student, choose promote, don't promote or graduate, then submit. Mistakes can be undone under **Manage Promotions**.

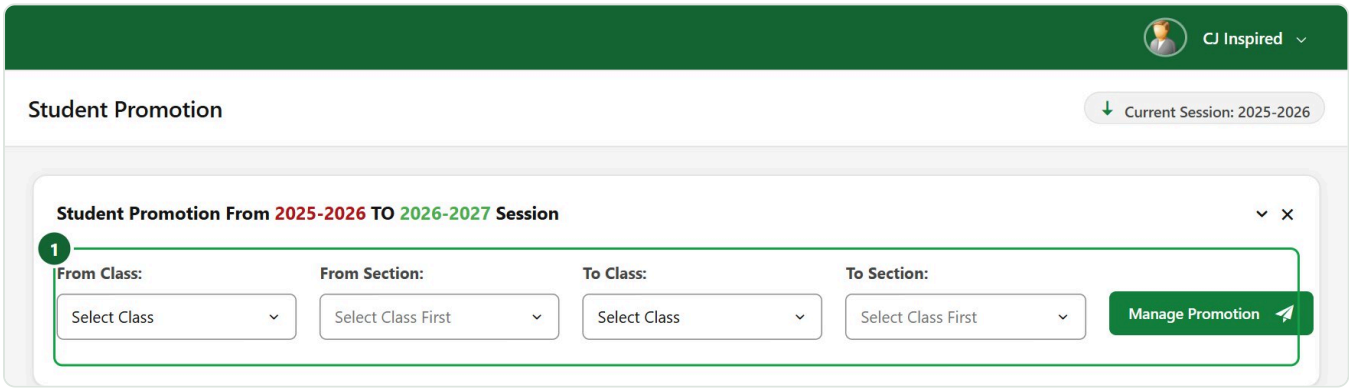

Figure 17. Student promotion selector.

1. From class/section to class/section, then load students

How to build a timetable

1. Open **Academics** → **Timetables** and create a timetable record for a class (and, for exam timetables, an exam).
2. Open the record with **Manage**, add time slots, then assign subjects to each day and slot.
3. Everyone can view and print timetables from the same menu.

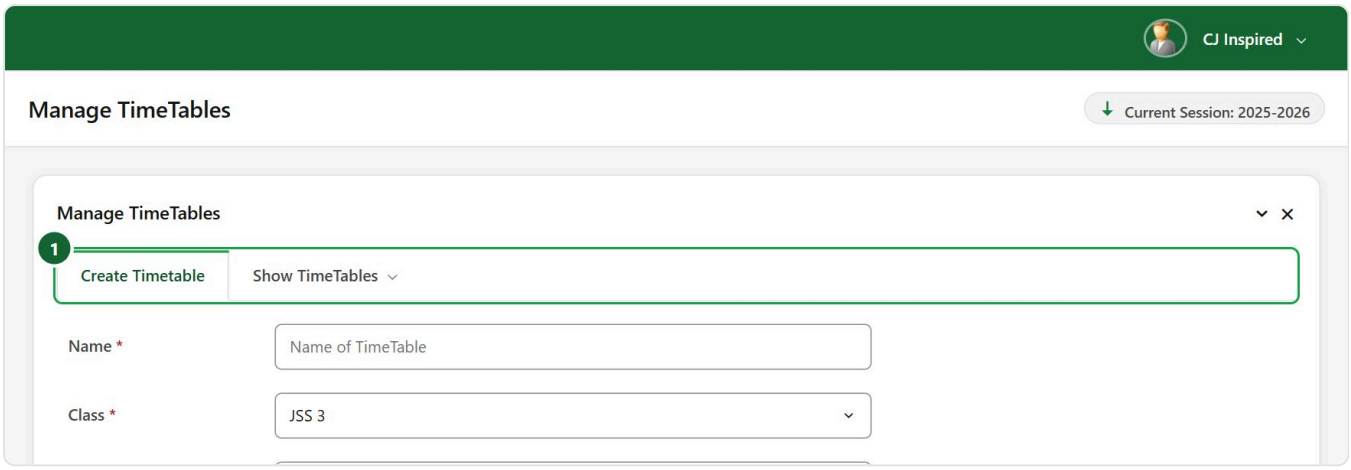

Figure 18. Timetables.

1. Create a timetable record, then add time slots and subjects

Teacher tasks

Teachers see the Academics, Students and Exams menus. They can view class lists, enter marks and view marksheets. They cannot create students or print tabulation sheets.

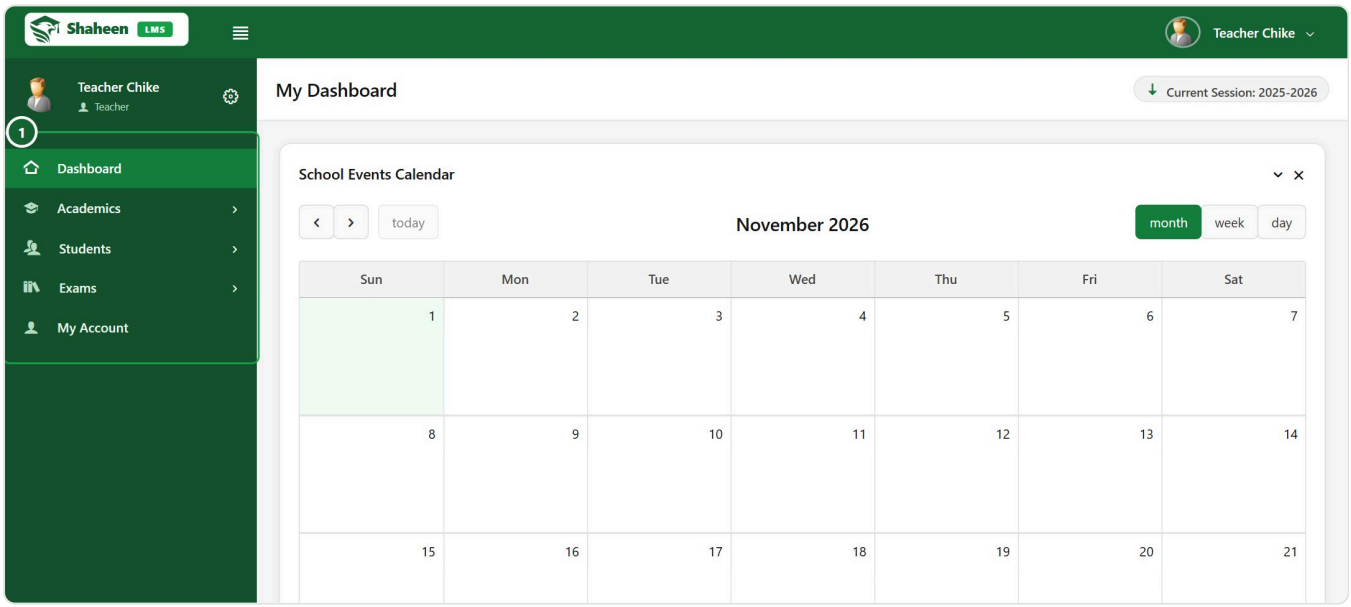

Figure 19. Teacher dashboard and menu.

1. Sidebar menu: only shows modules this role may use

How to enter marks

1. Open **Exams → Marks**.
2. Choose the **exam, class, section and subject**, then press **Manage Marks**.
3. Type each student's continuous assessment (CA) and exam scores (the total cannot exceed 100), then press **Update Marks**. Grades, subject positions and term totals are calculated for you.

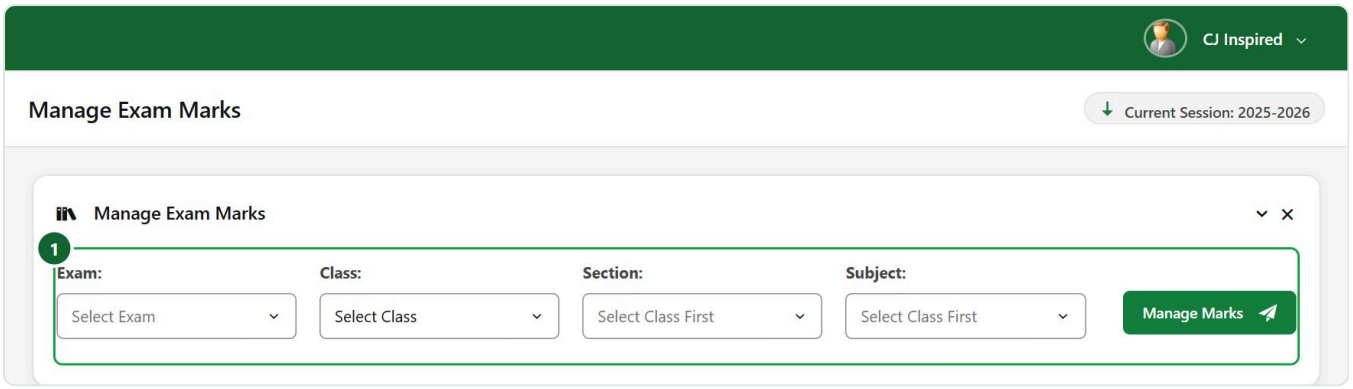

Figure 20. Mark entry selector.

1. Choose Exam, Class, Section and Subject, then "Manage Marks"

Warning · Seen during testing.
In this demo database the current session is 2025-2026, but the seeded students are enrolled in 2018-2019. Manage Marks therefore shows "Record Not Found". The mark-entry grid could not be captured for this guide (*not verified*).

How to view and print a marksheet

1. Open **Exams** → **Marksheet**, choose a class and section, and press the student's **View Marksheet** button.
2. Choose the year to see each exam's results.
3. Press **Print Marksheet** for the print layout. Super Admin, Admin, the student and their parent can print; teachers can view only.

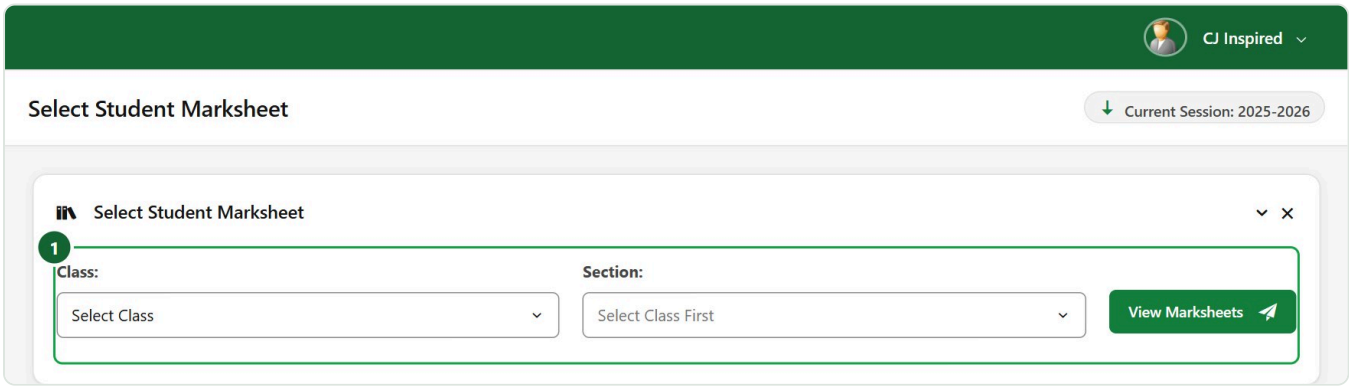

Figure 21. Marksheet selector.

1. Choose Class and Section to list students and open their marksheets

Accountant tasks

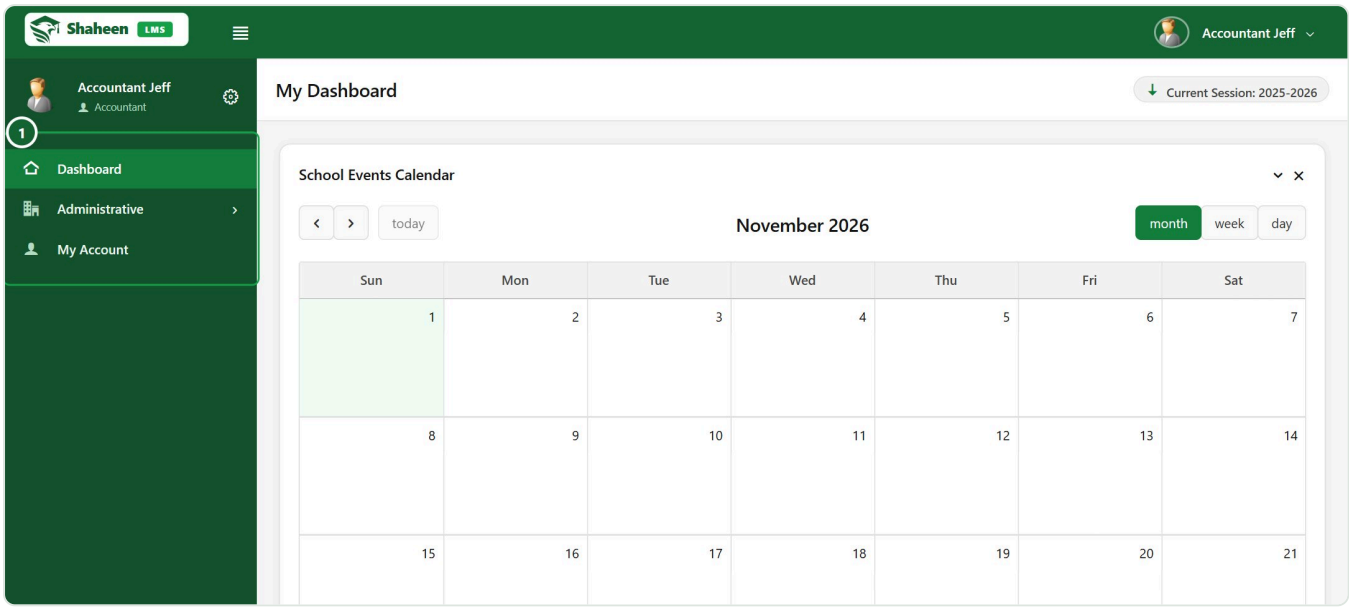

Figure 22. Accountant dashboard: only Administrative → Payments and My Account.

1. Sidebar menu: only shows modules this role may use

How to create a fee

1. Open **Administrative → Payments → Create Payment**.
2. Enter the title, choose the class (or leave it empty for all classes), the method and the amount.
3. Press **Submit form**. A reference number is generated.

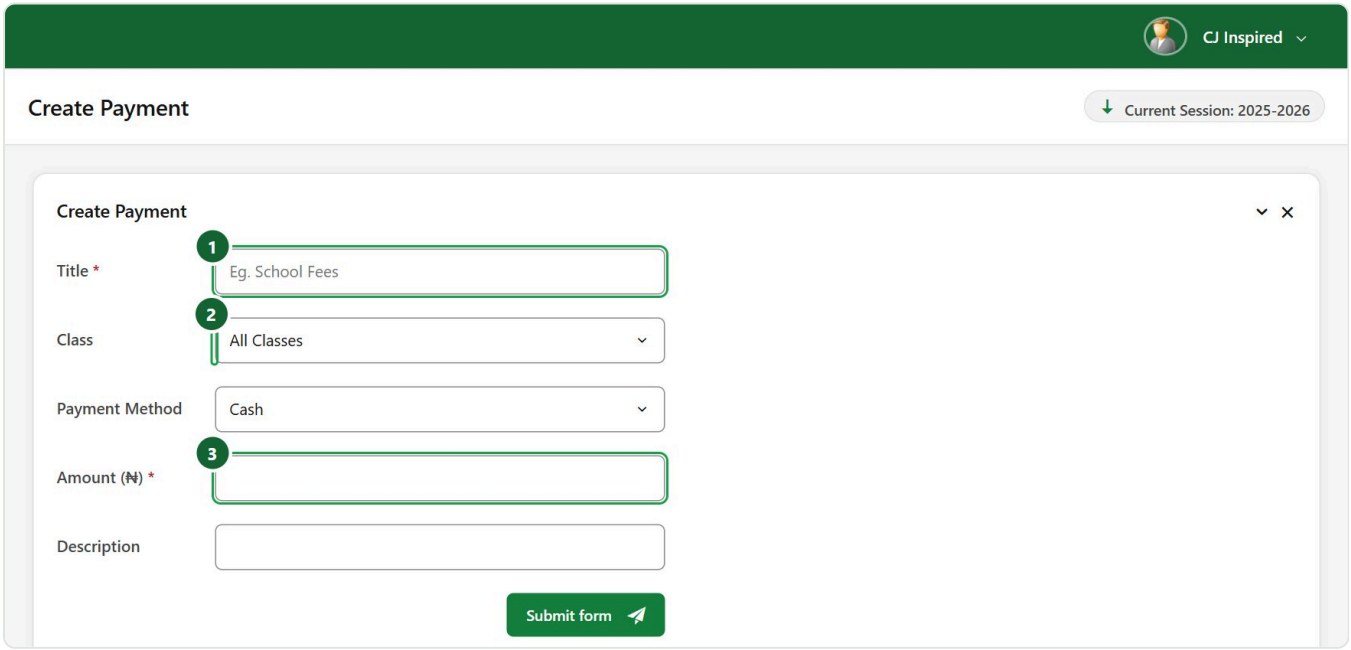

Figure 23. Create Payment.

1. Fee title, for example "School Fees"
2. Class (leave empty for all classes)
3. Amount (currency sign is the Nigerian Naira)

How to collect a fee and print a receipt

1. Open **Payments** → **Student Payments**, choose the class and press **Submit**. This creates each student's fee records for the session.
2. In the student's row, open **Manage Payments** → **All Payments**.
3. Under *Incomplete Payments*, type the amount received in **Pay Now** and press **Pay**. Paid and balance update at once; part payments are allowed.
4. Use **Print Receipt** for the printable receipt. The *PDF* download fails on PHP 8.1 until dompdf is upgraded (chapter 11).

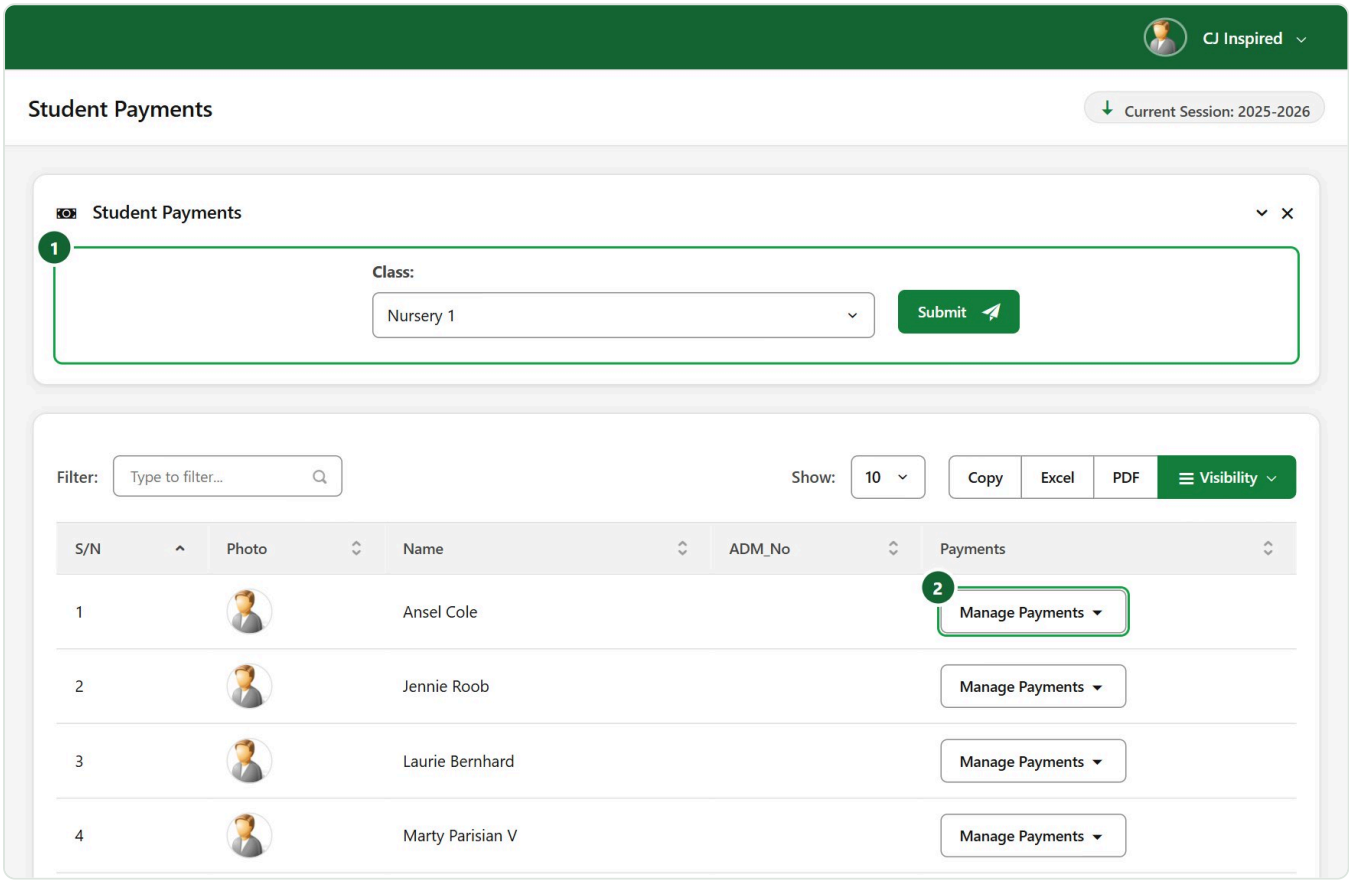

Figure 24. Student Payments for one class.

1. Pick a class and press Submit to generate fee records
2. Manage Payments: open the student invoice

Student tasks

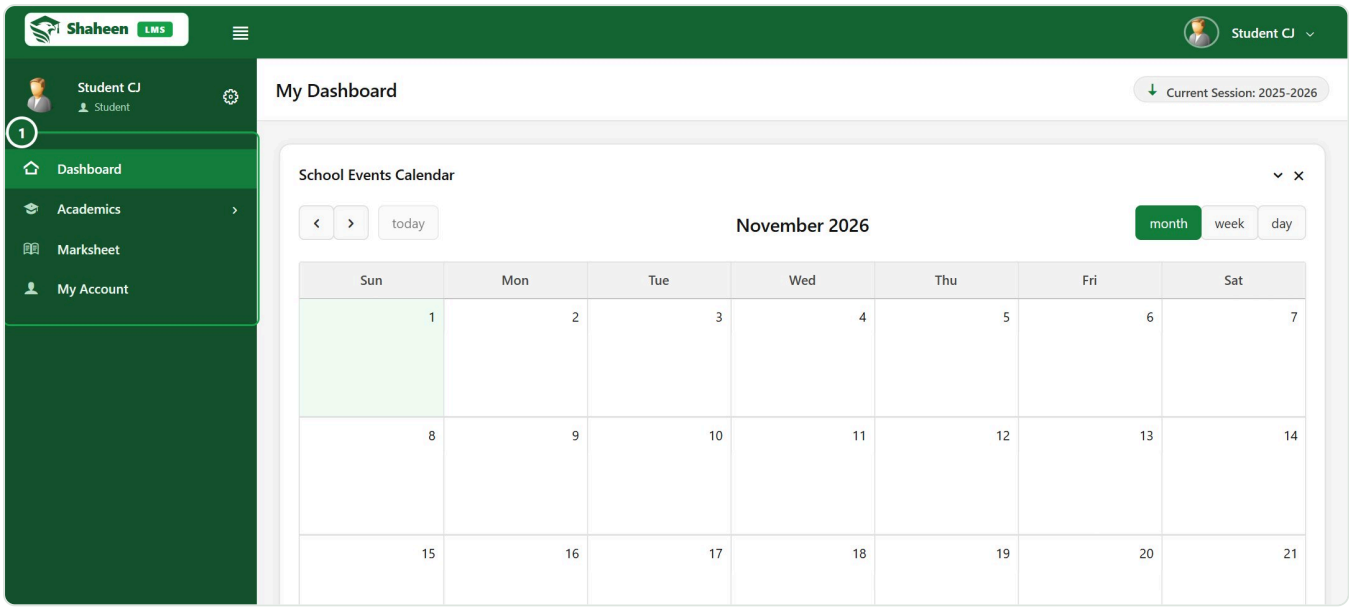

Figure 25. Student dashboard: Academics (timetable), Marksheet and My Account.

1. Sidebar menu: only shows modules this role may use

1. **See your profile:** user menu (top right) → **My profile**.
2. **See your timetable: Academics → Timetables**.
3. **See your results: Marksheet**, then choose the year. If the school has locked results, enter your PIN when asked.
4. **Change your password: My Account → Change Password**. Do this on your first login.

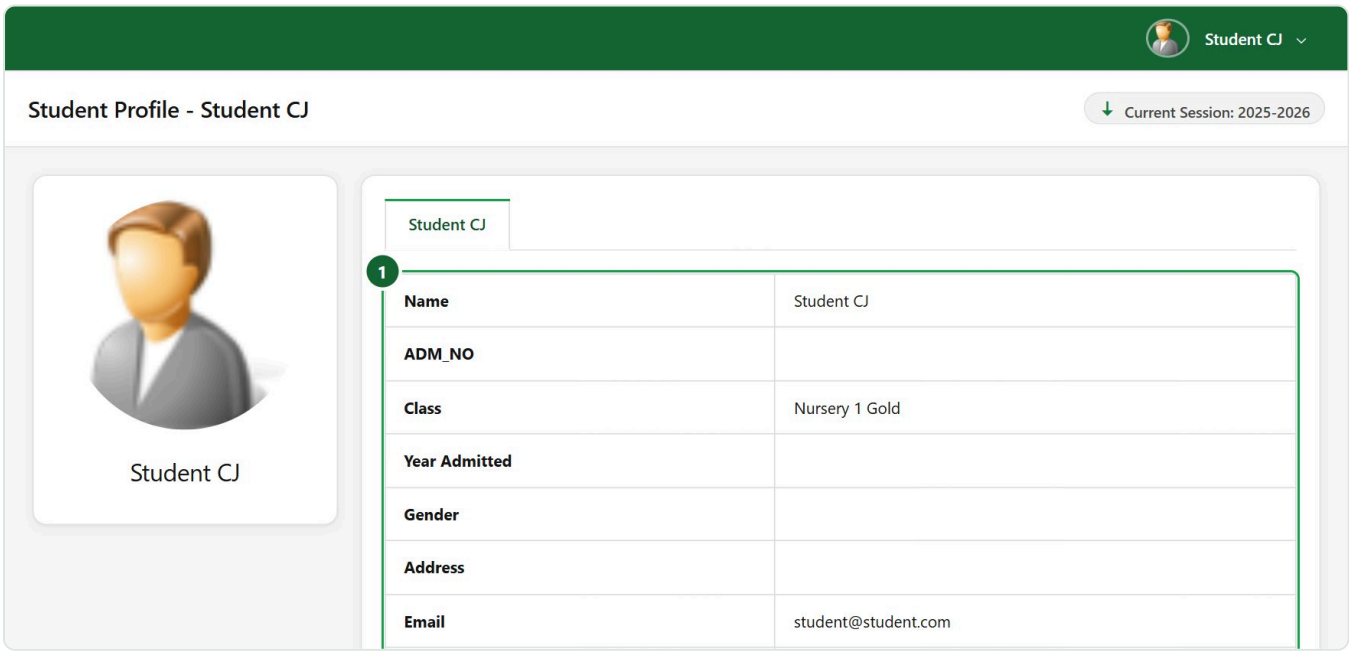

Figure 26. Student profile.

1. Personal and class details

Note · Seen during testing.
With no exam records in the demo data, the student's Marksheet link returns to the dashboard.

Parent tasks

1. **See your children: My Children** lists each linked child, with links to their profile and marksheet.
2. **See results:** open a child's marksheet; printing is allowed for your own children.
3. If a child is missing, ask the school to set you as the parent on the child's admission record.

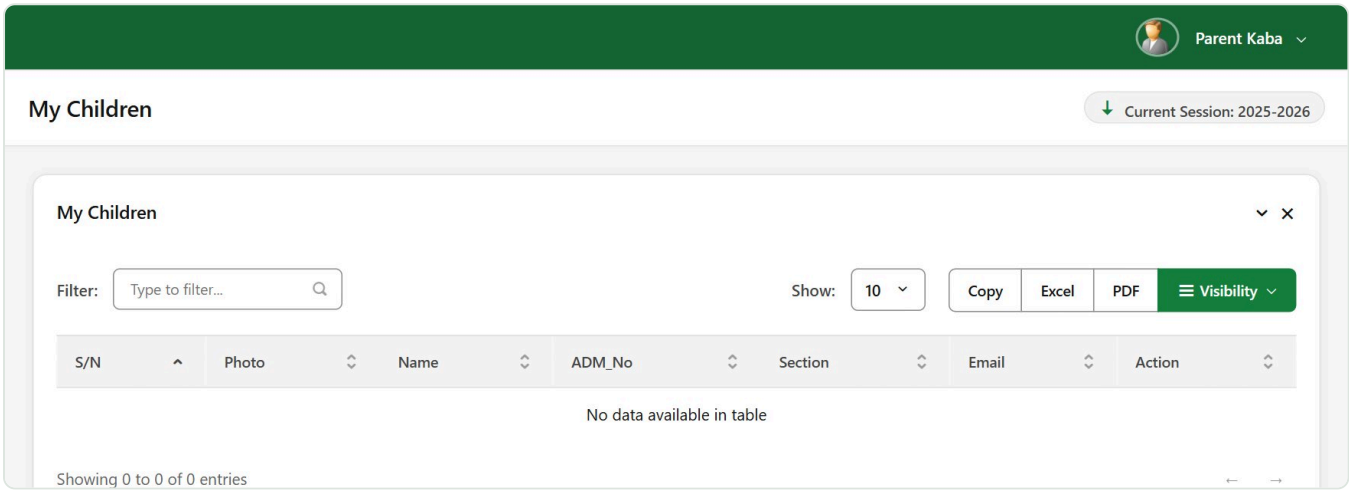

Figure 27. My Children (parent). The demo parent has no linked children.

Everyone: My Account

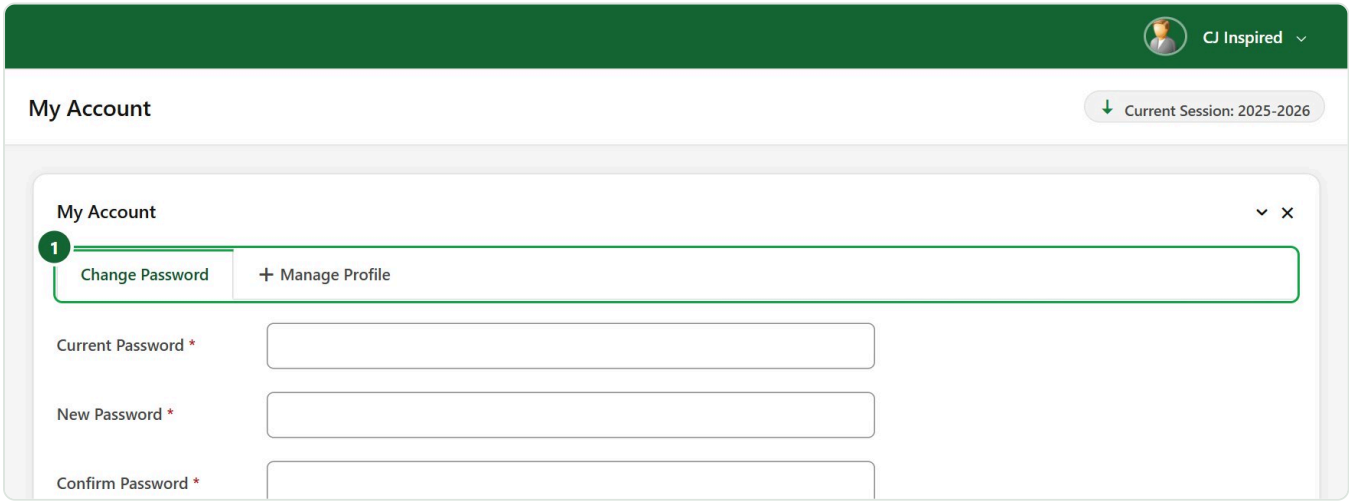

Figure 28. My Account: change password, or update profile details.

1. Change Password, or Manage Profile

On a phone

The layout adapts to phone screens: the sidebar collapses behind the menu button (top right), tables scroll sideways, and the dashboard totals show two to a row.

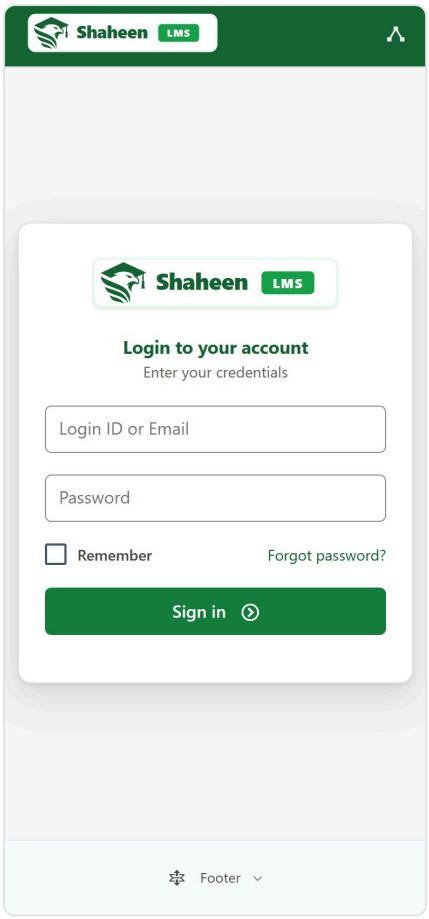

Figure 29. Login on a phone.

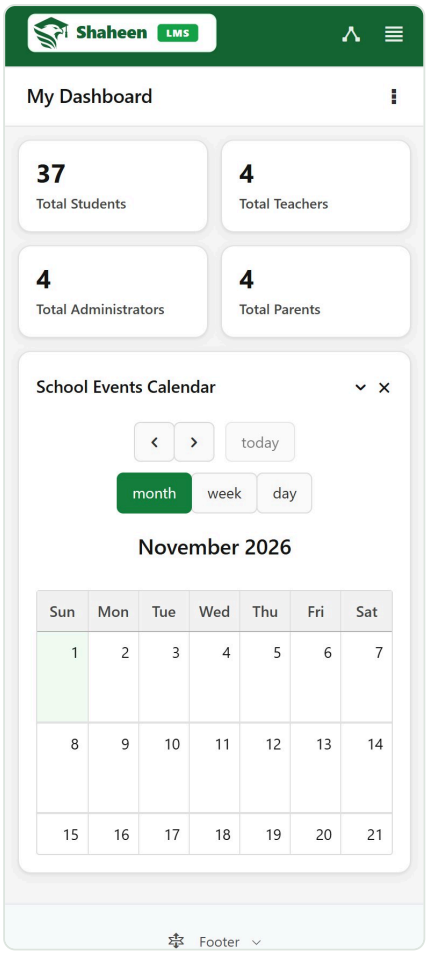

Figure 30. Dashboard on a phone.

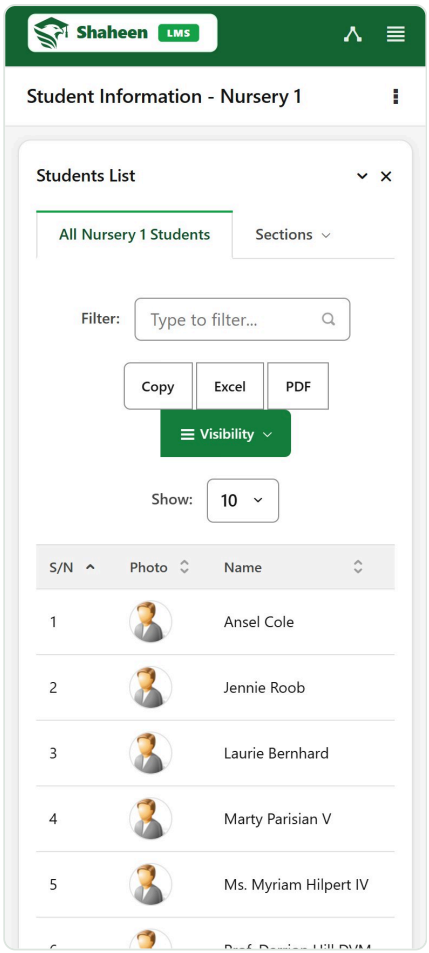

Figure 31. Student list on a phone.

14. FAQ and troubleshooting

Marks or student payments say "Record Not Found".

> No students are enrolled in the *current session*. Check Settings → Current Session, and promote students into the new session at the start of each year.

A student cannot see their results.

> Check that marks were entered for that exam, and whether *Lock Exam* is on. When it is on, the student needs a result PIN.

I forgot my password.

> A Super Admin can reset it from the user's row menu. The new password becomes `student` for students, or the role name for staff.

Photos do not appear after upload.

> The server is missing the storage link. The developer should run `php artisan storage:link`.

Receipt PDF shows an error.

> Use **Print Receipt** and the browser's "Save as PDF" until the PDF library is upgraded.

An admin cannot see the Settings or Pins menu.

> That is by design: Settings and the PIN menu belong to the Super Admin.

The calendar shows events we never created.

> They are sample events from the theme and are not stored in the database.

The page says "419 Page Expired".

> Your session timed out. Refresh the page and sign in again.

APPENDICES

Reference

A. Demo accounts

Important · Demo only.
These accounts are created by `database/seeders/UsersTableSeeder.php` and `StudentRecordsTableSeeder.php`. Delete them, or change every password, before real data goes in.

Role	Login (email)	Username	Password
Super Admin	cj@cj.com	cj	cj
Admin	admin@admin.com	admin	cj
Teacher	teacher@teacher.com	teacher	cj
Accountant	accountant@accountant.com	accountant	cj
Parent	parent@parent.com	parent	cj
Student	student@student.com	student	cj

The seeders also create numbered extra users (for example `teacher1`) whose password is their role name, and 36 sample students whose password is `student`.

B. Glossary

Session	An academic year, e.g. 2025-2026. Students, marks and fees are tied to one.
Term	One of three parts of a session; each exam belongs to a term.
Class type	A group of classes sharing a grade scale: Creche, Pre-Nursery, Nursery, Primary, Junior and Senior Secondary.
Section	A division of a class (e.g. Nursery 1 Gold) with a form teacher.
Marksheet	One student's report card for an exam.
Tabulation sheet	All students and subjects of a section for one exam, in a single grid.
Result PIN	A code a student enters to see results while the exam is locked.
LGA	Local Government Area (Nigerian address field kept from the original project).
TeamSA / TeamSAT / TeamAccount	Code names for role groups (chapter 7).
Migration / seeder	Laravel files that create tables and fill them with starting data.

C. Route and module quick reference

URL	Route name	Access
/login	login	Public
/dashboard	dashboard	Signed in
/my_account	my_account	Signed in
/super_admin/settings	settings	Super Admin
/users	users.index	TeamSA
/students/create	students.create	TeamSA
/students/list/{class}	students.list	TeamSAT
/students/promotion	students.promotion	TeamSA
/students/graduated	students.graduated	TeamSA
/classes, /sections, /subjects	*.index	TeamSA (delete: Super Admin)
/dorms, /exams, /grades	*.index	TeamSA (delete: Super Admin)
/marks	marks.index	TeamSAT
/marks/bulk	marks.bulk	TeamSAT
/marks/tabulation	marks.tabulation	TeamSA
/marks/batch_fix	marks.batch_fix	TeamSA
/marks/show/{id}/{year}	marks.show	Own, child, TeamSAT
/marks/print/{id}/{exam}/{year}	marks.print	Own, child, TeamSA
/timetables	tt.index	Signed in (edit: TeamSA)
/payments, /payments/create	payments.*	TeamAccount
/payments/manage/{class}	payments.manage	TeamAccount
/payments/invoice/{id}	payments.invoice	TeamAccount
/payments/receipts/{id}	payments.receipts	TeamAccount
/pins	pins.index	TeamSA, only while exam locked
/my_children	my_children	Parent
/register	register	Public (should be disabled)
